Geotechnical challenges in soft sensitives clays

Wednesday, 11th September 2019 at 17:15

Soft clays cover large areas of the Northern Hemisphere and form a major challenge in infrastructure construction, as well as a natural hazard. This lecture will explore techniques used to model the behaviour of these soils and give practical applications of how to design for the challenges they present.

This lecture is also being streamed as a webinar (details below).

Minna Karstunen is a Full Professor in the Division of Geology and Geotechnics at Chalmers University of Technology.

Speaker:
Minna Karstunen

Venue:
ACE Room SB-K456
Chalmers University of Technology,
Sven Hultins gata 6
Gothenburg

The lecture will be given in English.
